

Network and Security Lab 1- Assessment Two

Student Number: 33791124

Cyber Security Analyst, AWS Security

<https://www.amazon.jobs/en/jobs/3024017/cyber-security-analyst-aws-security>

Job Description

Build and manage services that will help detect and mitigate cybersecurity threats throughout the amazon infrastructure. As part of this job, you will be working with a variety of different employees in different branches in amazon such as data scientists and software engineers. You will be responsible for protecting the AWS cloud for all customers and continuously be improving the amazon infrastructure.

Whether it is a good fit?

I feel as though this is a good fit for me since the aws services are utilized by many companies, alongside with this amazon is a very strong based company with lots of opportunities to climb the corporate ladder and learn about new key developments. Also, the job is in the UK with is great as well as offering remote work at home as well.

Skills Table

Skill	Have this Skill	Evidence	How to develop
Degree in technical field	Yes	University	n/a
Experience working in security operation center	Yes	Summer internship at CrowdStrike	n/a
Develop in one modern language such as Python	N/A	Not a professional programmer but confident	Practice more leetcode challenges
Understanding Mitre Attck framework	no		Understand the framework and how to apply it

Cyber Security Analysis, SE Labs

(Link is only found on Glassdoor) <https://smartapply.indeed.com/beta/indeedapply/form/contact-info-module>

Job Description

As part of this job, I will be working for a security testing company and I will be responsible for testing, reporting and maintaining tests results. The company tests hardware and software but specializes in world-class anti-malware testing framework.

Is it a good fit?

I believe this is a good fit since firstly the job is in London, secondly although the pay is on the lower level at £25,000, I will be working for a cybersecurity company rather than for a bank or law firm. I believe this is valuable because I will be engaging with cybersecurity on the job as opposed to majority being responsible for maintaining infrastructure and monitoring which Ive heard from other people in this field can be quite boring especially if you have a passion for learning, therefore salary wouldn't be a major issue considering that I'm growing my experience.

Skills Table

Skill	Have this Skill	Evidence	How to develop
Familiarity with Microsoft windows	Yes	Default operating systems	Keep Regularly using windows
Linux Skills	Yes/no	Using Ubuntu	Needs to be stronger, maybe use Ubuntu more often

Cyber Security- Nuclear Graduates 2026

https://nucleargraduates.com/careers/?gh_jid=4670330101&gh_src=tcbidv22teu

Job Description

This is a program that allows many leading businesses in nuclear energy to take on graduates. This job allows for the opportunity to work in the nuclear sector and to gain experience in protecting critical infrastructure.

Is it a good Fit?

Yes, the job provides lots of valuable experience and protecting critical infrastructure is important and the salary is good especially for a starting salary. This job opportunity also provides opportunity to grow as well as if I choose to re-apply for another job, having this experience would be very useful.

Skills Table

Skill	Have this Skill	Evidence	How to develop
Problem Solving	Yes		Needs to be stronger so completing more programming challenges will prove useful.
Project Experience	Yes	CrowdStrike	Software Engineering Projects

Top Three Skills:

1. Fluency and confidence in one modern programming language
2. Linux Proficiency
3. Understanding MITRE ATT&CK Framework

Action Plan

1. Complete mini python projects like password strength checker or log parser, alongside this solve at least 3 leetcode or edabit challenges a week
2. Use Ubuntu regularly and practice using terminal commands
3. Take free training modules for MITRE ATT&CK defender and struct common techniques and map them into instances, try use platforms such as tryhackme to help grow my knowledge
