

Network and Security Lab 1 - Assessment Two

Student Name: Emel Cakar

Student Number: 33823095

Cyber Security Analyst, AWS Security

<https://www.amazon.jobs/en/jobs/3024017/cyber-security-analyst-aws-security>

Job Description

Build and manage services that will help detect and mitigate cybersecurity threats throughout the Amazon infrastructure. As part of this job, you will be working with a variety of different employees in different branches in Amazon such as data scientists and software engineers. You will be responsible for protecting the AWS cloud for all customers and continuously improving the Amazon infrastructure.

Whether it is a good fit?

I feel as though this is a good fit for me since the AWS services are utilised by many companies. Alongside this, Amazon is a very strong company with lots of opportunities to grow and learn about new key developments. Also, the job is in the UK which is great, as well as offering remote work from home.

Skills Table

Skill	Have this Skill	Evidence	How to develop
Degree in technical field	Yes	University	n/a
Experience working in security operation center	Yes	Summer internship at CrowdStrike	n/a
Develop in one modern language such as Python	N/A	Not a professional programmer	Practice on code challenges
Understanding MITRE ATT&CK framework	N/A		Understand the framework and how to apply it

Cyber Security Analysis, SE Labs

(Link only found on Glassdoor)

Job Description

As part of this job, I will be working for a security testing company and will be responsible for testing, reporting and maintaining test results. The company tests hardware and software but specialises in a world-class anti-malware testing framework.

Is it a good fit?

I believe this is a good fit since firstly the job is in London. Secondly, although the pay is on the lower end at £25,000, I will be working for a cybersecurity company rather than a bank or law firm. I believe this is valuable because I will be engaging with cybersecurity directly

on the job, as opposed to mostly maintaining infrastructure and monitoring, which can be less engaging. Salary would not be a major issue given that I am building experience.

Skills Table

Skill	Have this Skill	Evidence	How to develop
Familiarity with Microsoft Windows	Yes	Default operating system	Keep regularly using Windows
Linux Skills	Yes/No	Using Ubuntu	Needs to be stronger — use Ubuntu more

Cyber Security - Nuclear Graduates 2026

https://nucleargraduates.com/careers/?gh_jid=4670330101

Job Description

This is a programme that allows many leading businesses in nuclear energy to take on graduates. This job provides the opportunity to work in the nuclear sector and gain experience in protecting critical infrastructure.

Is it a good fit?

Yes, the job provides lots of valuable experience and protecting critical infrastructure is important. The salary is also good for a starting position. This opportunity also provides room to grow, and having this experience on my CV would be very useful if I choose to apply elsewhere in future.

Skills Table

Skill	Have this Skill	Evidence	How to develop
Problem Solving	Yes		Needs to be stronger — completing more
Project Experience	Yes	CrowdStrike	Software Engineering Projects

Top Three Skills:

1. Fluency and confidence in one modern programming language
2. Linux Proficiency
3. Understanding the MITRE ATT&CK; Framework

Action Plan

1. Complete mini Python projects such as a password strength checker or log parser. Alongside this, solve at least 3 LeetCode or Edabit challenges per week.
2. Use Ubuntu regularly and practise using terminal commands.

3. Take free training modules for MITRE ATT&CK; Defender, study common techniques and map them to real instances. Use platforms such as TryHackMe to develop knowledge further.
